Absolutely. Below is a **practical SAP BRIM T-Code master list**, organized by **SOM → Convergent Charging → Convergent Invoicing → FI-CA → Payments → Dunning/Collections → Integration/Monitoring**.

One important point first: **SAP BRIM is not a single SAP GUI transaction-code module.** SOM and SAP Convergent Charging use many application/Fiori/web-based functions, while **FI-CA and Convergent Invoicing contain a large number of classic SAP GUI transactions**. SAP's current documentation also describes Convergent Charging as the rating engine and Convergent Invoicing as part of the FI-CA/S/4HANA environment. (SAP Help Portal)

The uploaded BRIM material specifically covers these areas and identifies transactions such as BP, FP06, ST03, and STAD.

SAP BRIM — 100+ T-Code Master List

1. Business Partner / Master Data

T-Code	Description	Typical BRIM scenario
BP	Business Partner	Create/change/display customer
FPP1	Create Contract Partner	Create FI-CA contract partner
FPP2	Change Contract Partner	Change partner data
FPP3	Display Contract Partner	Display partner
FPP4	Maintain Payment Data	Maintain payment information
CAA1	Create Contract Account	Create customer contract account
CAA2	Change Contract Account	Change contract account
CAA3	Display Contract Account	Display contract account
FPL9	Display Account Balance	Check customer account
FPLC	Account Balance – Fullscreen Chronology	Detailed account history

The BRIM source material demonstrates BP for Business Partner processing and explains that contract accounts are associated with Business Partners.

---

2. FI-CA — Document Processing

These are among the **most important BRIM transactions** for functional consultants.

T-Code	Description	Real-time scenario
FPE1	Post Document	Manually post FI-CA document
FPE2	Change Document	Change eligible document
FPE3	Display Document	Display accounting document
FPE4	Display Document Changes	Audit document changes
FPE1S	Post Sample Document	Test posting
FPE2S	Change Sample Document	Change sample document
FPE3S	Display Sample Document	Display sample document
FPE2M	Mass Document Change	Change documents in bulk
FPEMMA	Log Analysis for Mass Runs	Analyze mass processing
FPEMMACGEN	Mass Clarification Case Generation	Generate clarification cases
FPEMMAMA	EMMA Mass Activities	Process mass activities
FPEMMAPREP	EMMA Job Analysis	Analyze EMMA jobs
FPDMS	Manage Documents	Manage document images
FPDMS1	Add Documents	Attach documents
FPDMS2	Determine Document Image	Determine image
FPDMS3	Assign Business Partner	Assign BP
FPDMS4	Delete Document Images	Delete images
FPDOC	Display Missing FI-CA Document	Investigate missing document
FP40	Transfer Posting	Transfer/reassign posting
FP07	Reset Clearing	Reset cleared item
FP08	Reverse Document	Reverse FI-CA document
FP08M	Mass Document Reversal	Reverse many documents

These transactions are documented in FI-CA transaction references, including FPE1, FPE2, FPE3, FP06, FP07, FP08, and FP40. (SAP Stack)

---

3. FI-CA — Account & Open Item Management

This area is **extremely important in BRIM support projects**.

T-Code	Description	Real-time scenario
FP06	Account Maintenance	Clear customer open items
FPL9	Display Account Balance	Check customer balance
FPLC	Full Account Chronology	Analyze account history
FPO1	Open Item List	Display open items
FPO1P	Parallel Open Item List	Large-volume open-item analysis
FPO1_ACC	Open Item List by Account	Analyze account open items
FPO2	Reconciliation of Open Items	Reconcile FI-CA/GL
FPO4	Item Evaluation	Evaluate open items
FPO4P	Parallel Item Evaluation	Mass item evaluation
FPO6	Evaluation of Report Totals	Analyze report totals
FPO7	Analysis of Extracted Open Items	Analyze extracted data
FPK1	Item Processing	Process FI-CA items
FPMA	Automatic Clearing	Automatically clear open items
FP07	Reset Clearing	Undo clearing
FPWLM	Manage Worklists	Manage FI-CA worklists
FPWLMN	Manage Worklists	Worklist processing

Example

Customer has:

Invoice ₹10,000

Payment ₹10,000

If the payment isn't automatically matched:

FPL9 → Check account

↓

FPO1 → Check open items

↓

FP06 → Account maintenance

↓

Clear invoice + payment

---

4. FI-CA — Payments

T-Code	Description	Real-time scenario
FP05	Process Payment Lot	Process incoming payment file
FP05CLE	Process Payment Lot	Process payment lot
FP05DIS	Display Payment Lot Item	Investigate payment
FP05FIK	Change Reconciliation Key	Correct reconciliation
FP05_PROP	Payment Clarification Proposal	Identify unclear payments
FP30	Find Payment	Search for payment
FP30C	Find Clarification Cases	Search clarification cases
FPCD	Post Payment	Manual payment posting
FPCF	Transfer Data to Cash Management	Transfer payment information
FPCPL	Payment Lot Clarification	Resolve unidentified payment
FPCPL_ALERT	Payment Lot Clarification	Handle alerts
FPCPR	Payment Run Clarification	Resolve payment-run issues
FPCS	Payment Card Billing	Process payment cards
FPCIBW	BW Extraction of Cleared Items	Extract cleared items
FPCIBWFC	Set CI Extraction Fields	Configure extraction
FPCRPO	Clarification Processing – Credit	Process credit clarification

T-Code	Description	Real-time scenario
FPCRPO_DET	Create Credit List	Create credit worklist
FPCVS	Clarification Processing	Payment clarification
FPCVS_CLAR	Confirm Payments	Confirm payment
FPCVS_CONF	Confirm Reported Payments	Confirm reported payment
FPCVS_EXAM	Third-Party Payment Monitoring	Monitor third-party payments

FI-CA references list FP05, FP06, FP30, FPCPL, FPCPR, FPCVS, and related payment/clarification transactions. (SAP Stack)

---

5. Payment Run

Most important transaction

FPY1 — Payment Run / Debit Memo Run

Used for mass payment processing.

Typical flow:

Customer invoices

↓

Open items

↓

FPY1

↓

Payment proposal

↓

Payment execution

↓

Payment medium

↓

Bank

Other payment-run transactions:

T-Code	Description
FPY1	Payment Run / Debit Memo Run
FPY1A	Payment Run Analysis
FPYS	Payment Run – Direct Payers
FPYP	Direct Debit Pre-notification
FPCHP	Check Assignment for Payment Run
FPCHV	Void Checks from Payment Run
FPCHO	Maintain Check Form Owner
FPCHR	Check Management
FPCHL	List of Issued Checks
FPCHN	Create Check in Register
FPCHS	Document Reversal after Check Lock
FPCHX	Check Extract

FPY1 is also independently documented as the FI-CA payment/debit memo run transaction. (TestingBrain)

---

6. Returns / Refunds

T-Code	Description	Scenario
FP09	Returns	Process returned payment
FP09ALV	Returns Lot Overview	Review return lot
FP09FIK	Change Reconciliation Key	Correct return reconciliation
FP09FS	Returns Lot Field Selection	Configure/display fields
FP09FSL	Returns Lot List	Display return list
FP18	Reverse Repayment Request	Reverse repayment

T-Code	Description	Scenario
FPM4	Display Returns History	Investigate returned payment
FPRU	Repayment Request Overview	Review refund requests
FP03R	Display Repayment Request	Display repayment
FPOR2	Change Payment Order	Change payment order
FPOR3	Display Payment Order	Display payment order
FPOR8	Reverse Payment Order	Reverse payment order
FPOR8M	Mass Reverse Payment Orders	Reverse many orders

---

7. Dunning

Dunning is another major BRIM/FI-CA area.

T-Code	Description	Scenario
FPVA	Dunning Proposal	Create dunning proposal
FPVB	Dunning Activity Run	Execute dunning
FPVC	Mass Reversal of Dunning Notices	Reverse dunning
FPM3	Display Dunning History	Review dunning history
FPVD	Dunning-related processing	Dunning operations
FPVT	Dunning Telephone List Transfer	Generate contact list
FPVT1	Dunning Telephone List Entries	Maintain list
FPVV	Valuation of Dunnings	Dunning valuation
FPVZ	Maintain Agreed Payment Amounts	Payment agreement
FPCODU	Correspondence Dunning	Dunning correspondence
FPCODUH	Dunning Correspondence History	Check correspondence history
FPCOPARA	Correspondence Printing	Print correspondence

Real-world example

Invoice due

↓

Payment not received

↓

FPVA

Dunning Proposal

↓

Review

↓

FPVB

Dunning Activity Run

↓

Customer receives reminder

---

8. Interest Calculation

T-Code	Description
FPI1	Calculate Interest Individually
FPI2	Interest on Cash Security Deposit
FPI3	Interest on Installment Plan
FPI4	Display Interest Calculation
FPI5	Loan Calculation/Test Transaction
FPINTM1	Interest Run
FPINTM2	Cash Security Deposit Interest Run
FPINTHDEL	Delete Interest History

---

9. Cash Journal / Cash Desk

T-Code	Description
FPCJ	Cash Journal
FPCJM	Edit Cash Object
FPCJM_EX	Process External Cash Desk Object
FPCJM_IN	Define Cash Desk Structure
FPCJR	Cash Desk Evaluation
FPCJ_MAINTAIN_RESP	Maintain Cash Journal Responsibilities
FPCC	Display Cash Desk Closing
FPCC0002	Create Account Statements
FPCC0026	Balance Notification Account Creation
FPCC0029	Create Business Partner Statement
FPCCR	Clarification of Cashed Checks

---

10. Check Processing

T-Code	Description
FP20	FI-CA Check Deposit List
FP25	Process Check Lot
FPCH1	Online Check Printing
FPCHA	Assign Payment Document to Check
FPCHL	List of Issued Checks
FPCHN	Create Check in Register
FPCHO	Maintain Owner of Check Forms
FPCHP	Check Assignment for Payment Run
FPCHR	Check Management
FPCHS	Document Reversal after Check Lock

T-Code	Description
FPCHV	Void Check
FPCHX	Check Extract

---

11. Transfer / Clearing

T-Code	Description
FP40	Transfer Posting
FPU2	Transfer Posting to Other Company Code
FPU5	Transfer Documents to Another Account
FPU6	Transfer History
FPMA	Automatic Clearing
FP07	Reset Clearing
FPG4	Close Reconciliation Keys Automatically
FPG5	Transfer FI-CA Documents to FI-GL
FPG7	Check CO-PA Documents
FPG7M	Mass Check CO-PA Documents
FPG8	Reverse General Ledger Transfer

---

12. General Ledger Integration

BRIM FI-CA eventually has to communicate with the general ledger.

T-Code	Description
FPG5	FI-CA Documents → FI-GL
FPG8	Reverse GL Transfer
FPO2	Reconcile Open Items with GL
FPE1	Post FI-CA Document

T-Code	Description
FPE3	Display FI-CA Document
FPE4	Display Document Changes
FPW1	Foreign Currency Valuation
FPW2	Foreign Currency Valuation Logs
FPW3	Event-Controlled Inverse Posting

---

13. Foreign Currency

T-Code	Description
FPW1	Foreign Currency Valuation
FPW2	Valuation Log
FPW3	Event-Controlled Inverse Posting
FPAR09	FI-CA Foreign Currency Valuation Archiving

---

14. Deferred Revenue

T-Code	Description
FPDR	Transfer/Post Deferred Revenue
FPDR_BY_EVENT	Event-Based Revenue Transfer
FPDR_BY_EVENT_CORR	Event-Based Revenue Adjustment
FPDR_DISPLAY	Display Deferred Revenue
FPDR_DISPLAY_EVENT	Display Event-Based Revenue
FPDR_DISPLAY_TIME	Display Time-Based Revenue

---

15. Archiving

T-Code	Description
FPAR01	FI-CA Official Number Archiving
FPAR02	FI-CA Archiving Request
FPAR03	Revenue Distribution Archiving
FPAR04	General Tax Reporting Archiving
FPAR05	General Revenue Reporting Archiving
FPAR06	General Tax Reporting Archiving
FPAR07	Delete Tax Reporting Data
FPAR08	Delete Revenue Reporting Data
FPAR09	Foreign Currency Valuation Archiving
FPAR10	Clearing History Archiving
FPAR11	Doubtful Receivables
FPAR12	Third-Party Invoicing
FPAR2	FI-CA Correspondence Archiving
FPARBP	Business Partner Archiving
FPARCASE0	Item List Archiving Runtime
FPARCASE1	Item List Archiving
FPARCOLL1	Collection Agency Archiving
FPARCR1	Check Deposit Archiving

---

16. SAP Convergent Invoicing

This is where BRIM becomes especially interesting.

The general flow is:

Subscription / Usage

↓

SAP Convergent Charging

↓

Billable Items

↓

Convergent Invoicing

↓

Billing

↓

Invoice

↓

FI-CA

↓

Receivable

SAP documentation confirms that Convergent Invoicing receives billing/usage data, creates billable items and invoices, and integrates with FI-CA. (SAP Help Portal)

Important transactions

T-Code	Purpose
FPB0	FI-CA/Business transaction processing
FPE1	Post FI-CA document
FPE3	Display FI-CA document
FPL9	Account balance
FPO1	Open item analysis
FP06	Account maintenance
FPMA	Automatic clearing
FPG5	Transfer to GL
FPEMMA	Mass-run log analysis
FPO6	Report total evaluation

Important: Convergent Invoicing itself is not equivalent to one classic transaction code. It is a BRIM process/component integrated with FI-CA. The source material explicitly explains that Convergent Invoicing is part of the contract-accounting environment rather than a completely separate standalone SAP application.

---

17. SAP Subscription Order Management — SOM

SOM is different.

You should **not expect 100 classic T-codes here**.

SOM commonly uses:

- Subscription Orders
- Subscription Contracts
- Product Master
- Pricing
- Change Processes
- Order Distribution Infrastructure (ODI)
- Fiori/UI applications
- Configuration through SPRO

Important objects/processes from your BRIM material include:

Object / Transaction	Purpose
BP	Business Partner
SPRO	SOM configuration
PRVC	Standard subscription contract transaction type
PRVO	Subscription order transaction type in documented scenario
PCEA	Document distribution step in documented scenario
ODI	Order Distribution Infrastructure
SOM Subscription Order	Create/manage subscription
Subscription Contract	Manage active subscription

Object / Transaction	Purpose
Change Order	Handle contract changes

The uploaded material explains that PRVC is a baseline subscription-contract configuration and that subscription contracts are distributed through ODI to Convergent Invoicing/Convergent Charging.

SAP's current documentation likewise describes subscription orders generating subscription contracts and distributing contract data toward FI-CA/Convergent Invoicing. (SAP Help Portal)

---

18. SAP Convergent Charging — CC

This is another important distinction.

SAP Convergent Charging does not work like classic FI-CA with hundreds of SAP GUI T-codes.

It is primarily an application for:

- Charge plans
- Price plans
- Rate plans
- Recurring charges
- One-time charges
- Usage-based charging
- Allowances
- Account balances
- Charging
- Rating
- Catalog management

SAP describes Convergent Charging as the BRIM rating engine supporting subscription/usage pricing and high-volume real-time processing. (SAP Help Portal)

So for CC, think:

SAP CC Administration

↓

Catalog

↓

Charge Plan

↓

Rate

↓

Pricing

↓

Charging

↓

Charged Item

↓

Billable Item

↓

Convergent Invoicing

rather than:

T-code → transaction

---

19. SAP Configuration

One of the most important transactions for a BRIM consultant:

SPRO

Use:

SPRO

↓

SAP Customizing Implementation Guide

↓

Financial Accounting

↓

Contract Accounts Receivable and Payable

This is where much of the FI-CA/Convergent Invoicing configuration is maintained. Your source material explicitly identifies SPRO as the configuration entry point for Convergent Invoicing/FI-CA.

---

20. Performance / Monitoring

T-Code	Purpose
ST03	Workload analysis
STAD	Business transaction analysis
ST22	ABAP dump analysis
SM21	System log
SM37	Background job monitoring
SM36	Schedule background job
SM50	Work process overview
SM66	Global work process overview
SM12	Lock entries
SM13	Update requests
SM35	Batch input monitoring
SM59	RFC destinations
WE02	IDoc display
WE05	IDoc list
BD87	IDoc reprocessing
SLG1	Application log
SU53	Authorization error analysis
ST01	System trace

T-Code	Purpose
ST05	SQL/performance trace
SE16N	Table data display
SE11	ABAP Dictionary
SE38	ABAP program execution

Your uploaded BRIM material specifically recommends ST03 and STAD for productive sizing/performance analysis.

---

21. Integration / IDoc / RFC Troubleshooting

These are not exclusively BRIM transactions, but **very important for a BRIM technical/functional consultant**.

T-Code	Use
SM59	Check RFC connections
WE02	Display IDocs
WE05	Search IDocs
BD87	Reprocess failed IDocs
WE19	Test IDoc
WE20	Partner profiles
WE21	Ports
SM58	Transactional RFC errors
SMQ1	Outbound qRFC
SMQ2	Inbound qRFC
SM37	Background jobs
SLG1	Application logs
ST22	Runtime errors
SM21	System logs

T-Code	Use
SU53	Authorization troubleshooting
ST05	SQL trace
ST12	Performance trace

---

22. Most Important BRIM T-Codes to Memorize

If you're preparing for a **SAP BRIM interview**, don't try to memorize 100+ immediately.

Start with these:

⭐ **Top 20**

Rank	T-Code	Remember it as
1	**BP**	Business Partner
2	**SPRO**	Configuration
3	**FPE1**	Post FI-CA Document
4	**FPE2**	Change Document
5	**FPE3**	Display Document
6	**FPL9**	Account Balance
7	**FP06**	Account Maintenance
8	**FPMA**	Automatic Clearing
9	**FP07**	Reset Clearing
10	**FP08**	Reverse Document
11	**FP05**	Payment Lot
12	**FP30**	Find Payment
13	**FPY1**	Payment Run
14	**FP09**	Returns
15	**FP18**	Repayment Request

Rank	T-Code	Remember it as
16	**FPVA**	Dunning Proposal
17	**FPVB**	Dunning Run
18	**FPG5**	FI-CA → FI-GL
19	**ST22**	Dump Analysis
20	**SLG1**	Application Log

---

23. BRIM End-to-End Example

Suppose a telecom company sells a **₹999 monthly subscription**.

Step 1 — Customer

BP

Create:

Customer

Business Partner

Contract Account

Step 2 — Subscription

SOM:

Subscription Order

↓

Subscription Contract

Step 3 — Rating

SAP Convergent Charging:

Usage

↓

Charge Plan

↓

Rate

↓

Rated Charge

SAP CC supports recurring and usage-based charging/rating. (SAP Help Portal)

Step 4 — Billable Item

Rated Charge

↓

Billable Item

Step 5 — Billing

Convergent Invoicing:

Billable Items

↓

Billing

↓

Invoice

SAP documentation confirms that Convergent Invoicing consolidates charges from multiple billing streams into invoices. (SAP Help Portal)

Step 6 — FI-CA

Invoice

↓

Receivable

↓

FPL9

Consultant checks:

FPL9 → Customer balance

FPO1 → Open items

Step 7 — Customer Payment

Payment

↓

FP05

↓

Payment Lot

↓

FP06 / FPMA

↓

Clearing

Step 8 — Payment Run

For outgoing/debit processes:

FPY1

↓

Proposal

↓

Payment

↓

Bank

Step 9 — Dunning

If customer doesn't pay:

FPVA

↓

Dunning Proposal

↓

FPVB

↓

Dunning Activity

Step 10 — General Ledger

FI-CA

↓

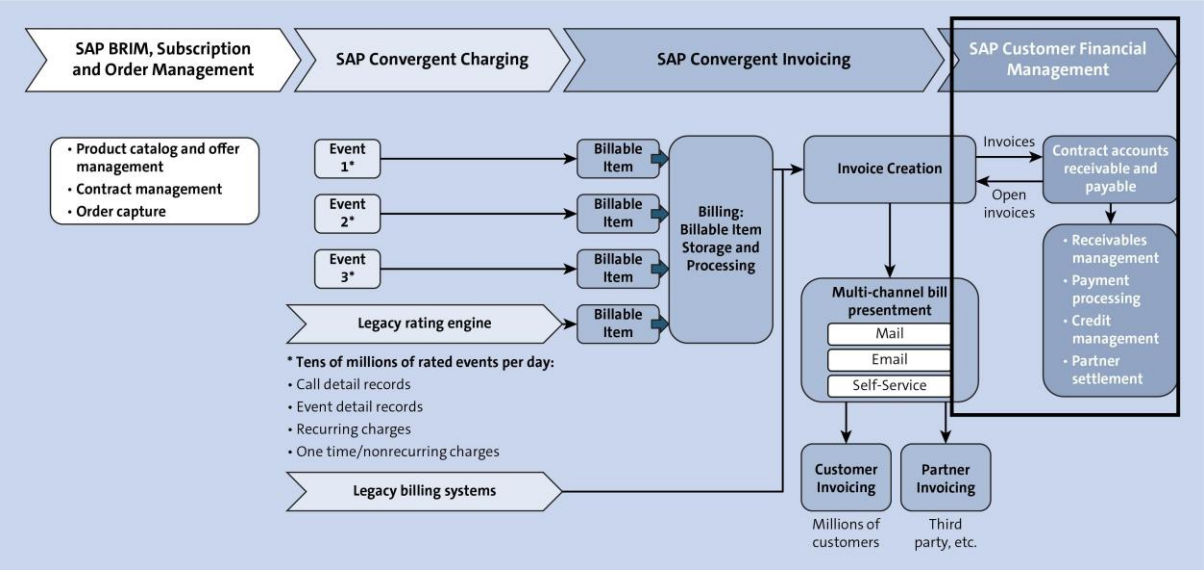

FPG5

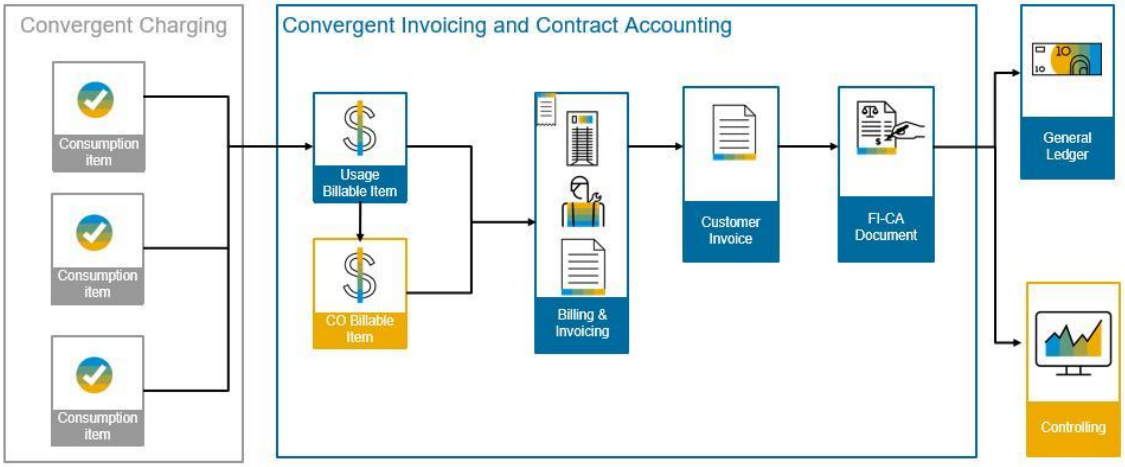

↓

FI-GL

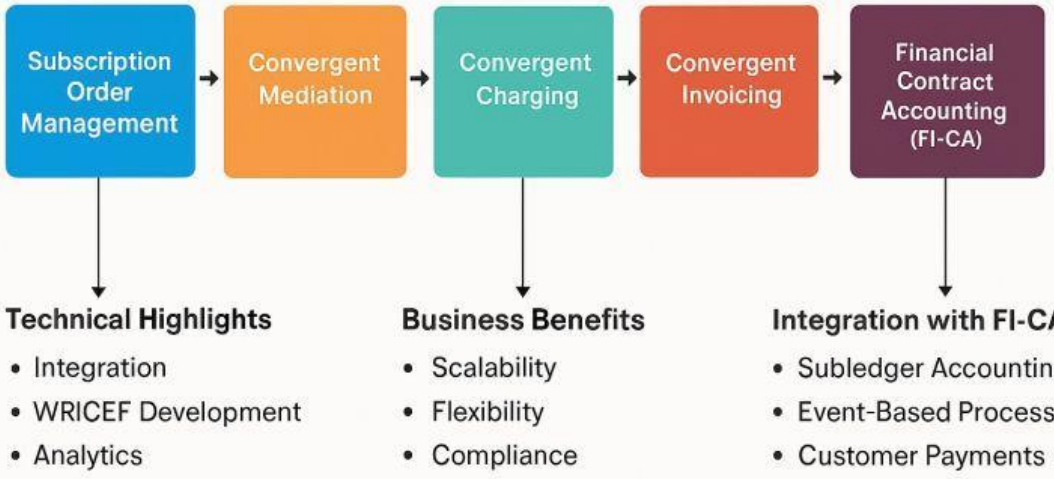

---

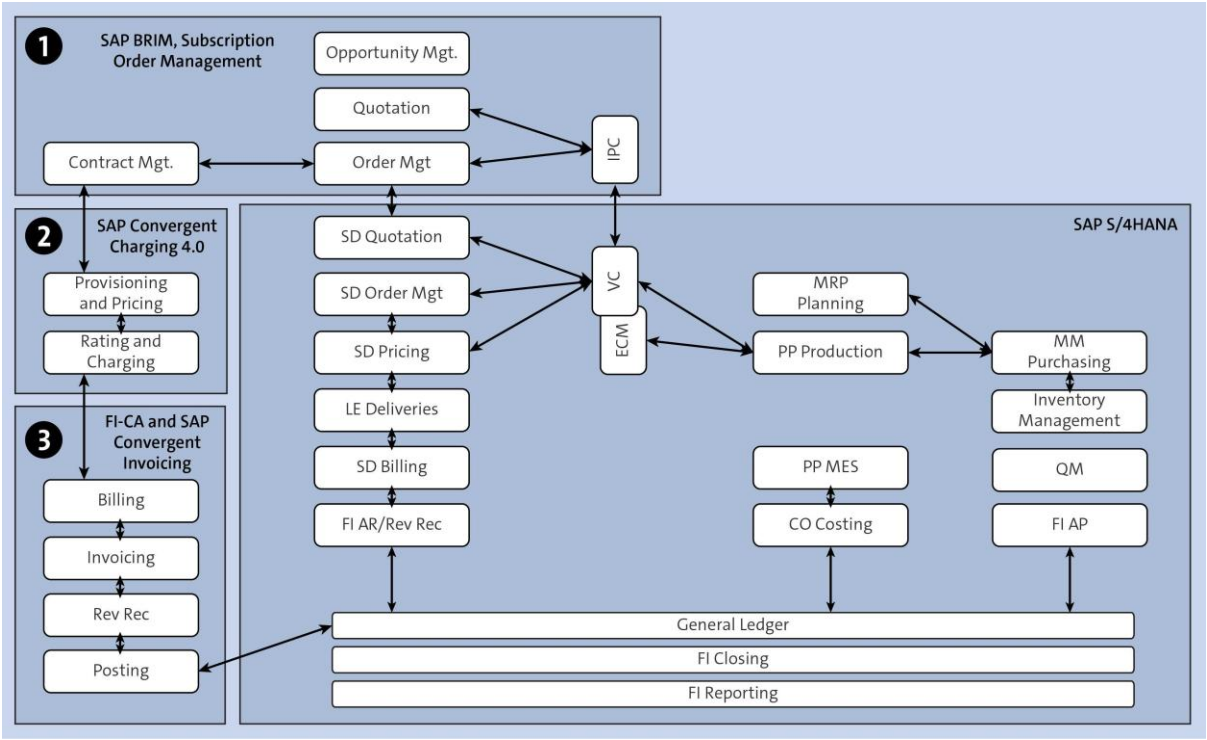

24. The BRIM Architecture You Should Remember

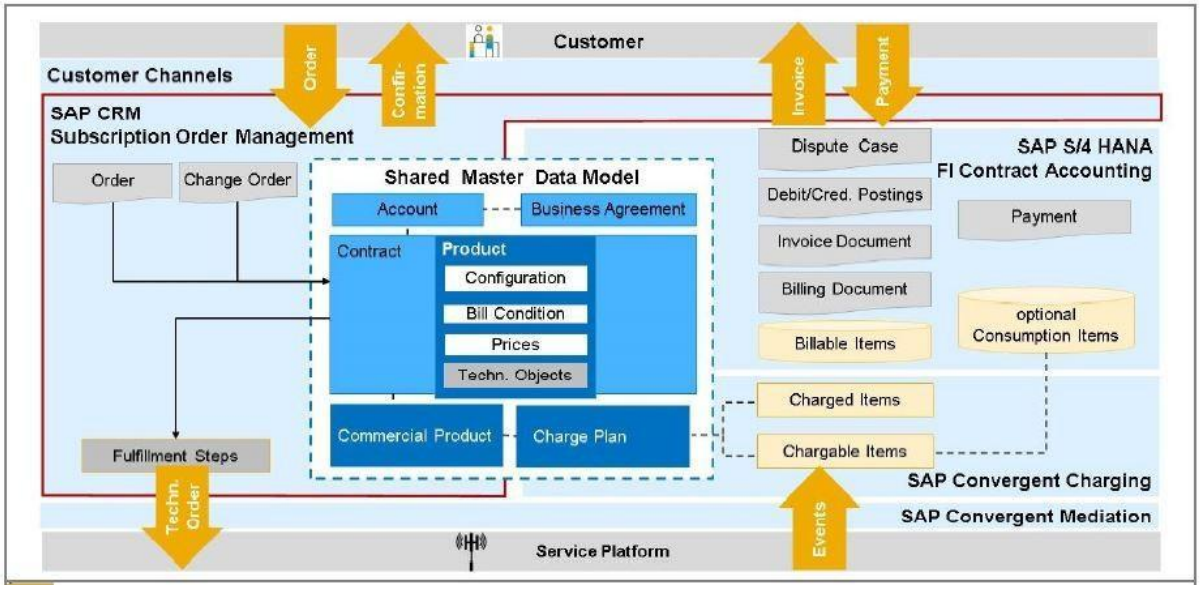

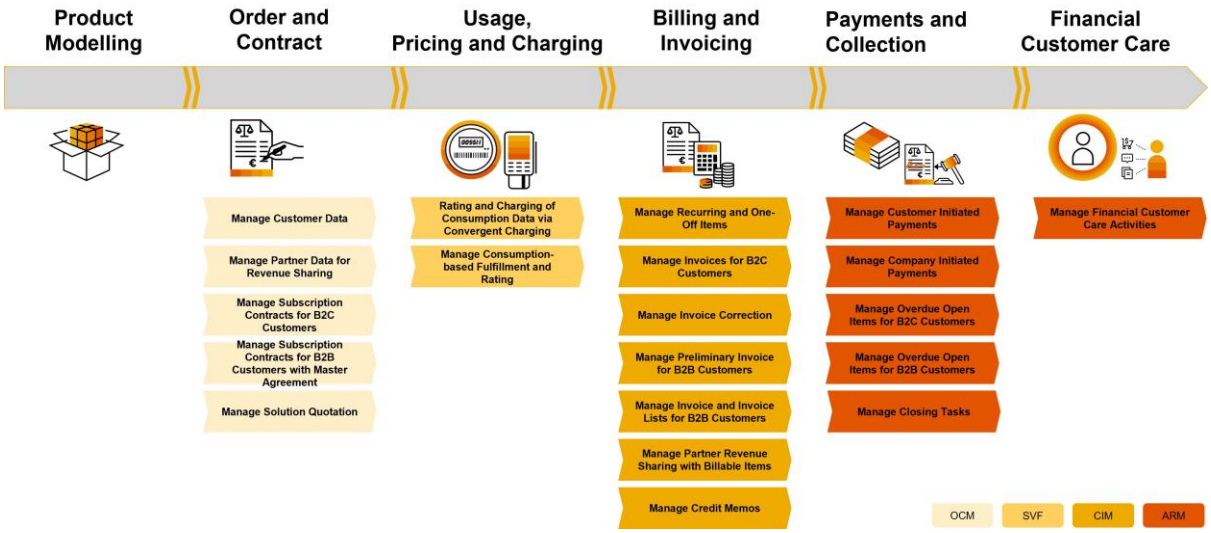

SAP BRIM + FI-CA :
End-to-End Scalable Billing Archirecture

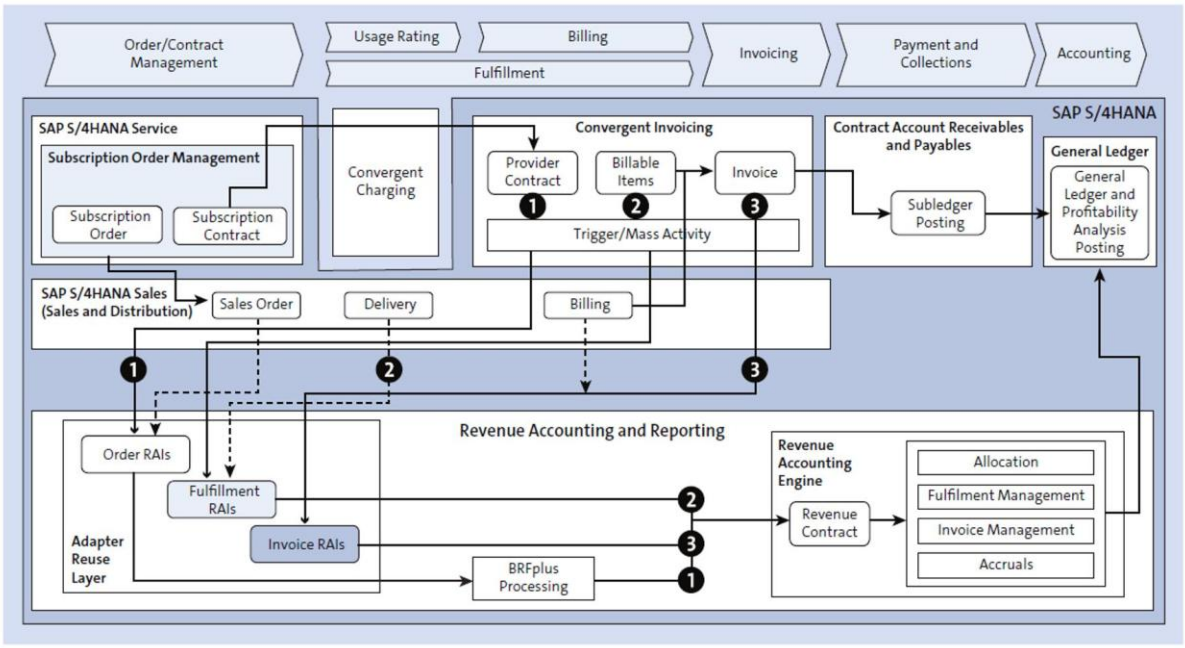

SAP Billing and Revenue Innovation Management Data Model

Order/Contract Management
Usage Rating
Billing
Fulfillment
Invoicing
Payment and Collections
Accounting
SAP S/4HANA
SAP S/4HANA Service
Subscription Order Management
Subscription Order
Subscription Contract
Convergent Charging
Convergent Invoicing
Provider Contract
Billable Items
Invoice
Trigger/Mass Activity
Contract Account Receivables and Payables
Subledger Posting
General Ledger
General Ledger and Profitability Analysis Posting
SAP S/4HANA Sales (Sales and Distribution)
Sales Order
Delivery
Billing
Revenue Accounting and Reporting
Order RAIs
Fulfillment RAIs
Invoice RAIs
Adapter Reuse Layer
BRFplus Processing
Revenue Accounting Engine
Revenue Contract
Allocation
Fulfilment Management
Invoice Management
Accruals

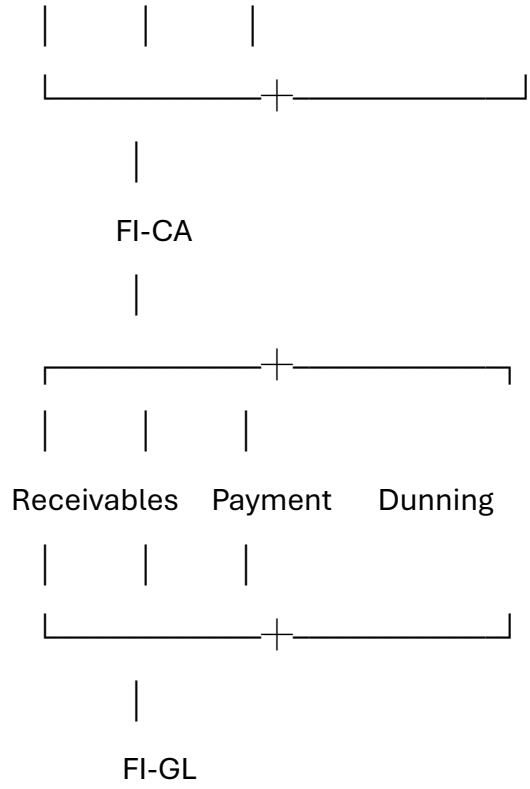

The easiest way to remember the complete solution is:

SAP BRIM

SOM CC CI

Subscription Rating Billing

Order Charging Invoicing

SAP's BRIM documentation describes this integrated flow across Subscription Order Management, Convergent Charging, Convergent Invoicing and Contract Accounting. (SAP Help Portal)

One important correction to keep in mind

You should **not tell an interviewer that every BRIM component has 100+ T-codes**.

A better statement is:

"BRIM uses classic SAP GUI transactions extensively in FI-CA/Convergent Invoicing, while SOM and SAP Convergent Charging rely heavily on application-specific/Fiori/web-based functions and configuration."

That distinction is important in a real BRIM project.

Yes. Below is a **comprehensive RAR (Revenue Accounting and Reporting) T-code / report list**. One important point: the exact available transactions depend on the SAP RAR release—classic RAR and current S/4HANA Revenue Accounting have differences. SAP's current documentation lists **37 RAR-related reports/functions** in its report overview. (SAP Help Portal)

SAP RAR — Complete T-Code List

1. RAR Configuration

T-Code	Purpose
FARR_IMG	RAR Customizing / Configuration
SPRO	SAP IMG; access RAR configuration
BRF+	Business Rules Framework for RAR rules

Most important: FARR_IMG

---

2. Revenue Accounting — Main Processing

These are the most important transactions in the RAR process.

T-Code	Purpose
FARR_REV_TRANSFER	Transfer Revenue
FARR_LIABILITY_CALC	Calculate Contract Liabilities and Contract Assets
FARR_REV_POST	Revenue Posting Run
FARR_REVENUE_REPOST	Revenue Reposting
FARR_CALC_REV_CATCHUP	Calculate quarterly/yearly revenue catch-up
FARR_ROUNDING_CALC	Calculate rounding differences
FARR_COST_CLEAR	Cost clearing
FARR_FISCAL_YEAR_SHIFT	Fiscal-year shift
FARR_REVERSAL	Revenue document reversal
FARR_SHIFT	Shift erroneous contracts to next period

SAP identifies FARR_REV_TRANSFER → FARR_LIABILITY_CALC → FARR_REV_POST as core revenue-processing activities. (SAP Help Portal)

---

3. Revenue Accounting Contracts

T-Code	Purpose
FARR_CONTRACT_CHECK	Validate Revenue Accounting Contracts

T-Code	Purpose
FARR_CONTR_COMPLETE	Set contract status to Complete
FARR_POB_CANCEL	Cancel Performance Obligations
FARR_REPR_CNTR	Reprocess Contracts
FARR_REPR_ACCT	Reprocess Account Determination
FARR_SUSPEND	Mass suspend/unsuspend revenue
FARR_SUSPENSION	Mass suspension of postings
FARR_PROD_CLEANUP	Clean up/reverse productive data

These are particularly useful when troubleshooting **Revenue Contracts, POBs and contract processing**. (SAP Help Portal)

---

4. RAI — Revenue Accounting Items

RAIs are the incoming operational items that RAR processes.

T-Code / Report	Purpose
FARR_RAI_PROC	Process Revenue Accounting Items
FARR_RAI_TRANS	Transfer Revenue Accounting Items
FARR_RAI_DELETE	Delete exempted RAIs
FARR_INB_DEL_EXM_RAI	Delete exempted inbound RAIs
FARR_RAI_PROC_NEWACP	Process RAIs for new accounting principle
FARR_REPR_PPRAI	Reprocess postponed RAIs
RFARR_RAI_PP_CHECK_START	Check RAIs
RFARR_RAI_PP_PROC_START	Process RAIs
RFARR_RAI_PP_TRANS_START	Transfer RAIs
RFARR_EXEMPTED_RAIS_DELETE	Delete exempted RAIs

SAP's current RAR documentation separates inbound processing into RAI processing, transfer, validation and reprocessing activities. (SAP Help Portal)

---

5. RAR Integration / Inbound Interfaces

These are especially important in a **BRIM + RAR** implementation.

Function / Interface	Purpose
FARR_INB_ORDER_API	Order RAI interface
FARR_INB_COST_API	Cost RAI interface
FARR_INB_FLFMT_API	Fulfillment RAI interface
FARR_INB_INVOICE_API	Invoice RAI interface
FARR_INB_INIT_LOAD	Initial RAR load
FARR_INB_DEL_EXM_RAI	Delete exempted inbound RAIs

The major RAI categories include **Order, Cost, Fulfillment and Invoice**. These interfaces bring operational information into Revenue Accounting. (SAP Help Portal)

---

6. Reconciliation / Validation

Very important for support and production.

T-Code	Purpose
FARR_BIZ_RECON	Reconcile operational data with RAR
FARR_BIZ_RECON_APJ	Application job for business reconciliation
FARR_CONTRACT_CHECK	Validate Revenue Contracts
FARR_CHECK_CONS	Consistency check between sender data and RAIs
RFARR_RAI_PP_CHECK_START	RAI processing/check
FARR_MIGR_BALANCES	Check migration balances

For example, FARR_BIZ_RECON is specifically used to reconcile operational data with Revenue Accounting. (SAP Help Portal)

---

7. Migration

T-Code / Report	Purpose
FARR_INB_INIT_LOAD	Initial load of RAIs and contract creation
FARR_MIGR_BALANCES	Check migration balances
FARR_MIG_ED_CALC	Migration exchange-rate difference calculation
FARR_RAI_PROC_LOAD	Process initial-load RAIs
FARR_FISCAL_YEAR_SHIFT	Fiscal-year processing/shift

Migration is particularly important when moving existing revenue data into RAR. SAP documents FARR_MIGR_BALANCES for checking migration balances. (SAP Help Portal)

---

8. Period-End / Closing

T-Code	Purpose
FARR_PERIOD_IN_CLOSE	Set RAR periods to "In Closing"
FARR_FISCAL_YEAR_SHIFT	Process fiscal-year shift
FARR_AGGREGATION	Historical data aggregation
FARR_CALC_REV_CATCHUP	Revenue catch-up calculation
FARR_ROUNDING_CALC	Rounding difference calculation
FARR_COST_CLEAR	Cost clearing
FARR_REV_POST	Revenue posting

These become particularly important during **month-end and year-end closing**. (SAP Help Portal)

---

9. Revenue Suspension / Error Handling

T-Code	Purpose
FARR_SUSPEND	Mass revenue suspension/unsuspension
FARR_SUSPENSION	Mass suspension of postings
FARR_SHIFT	Move erroneous contracts to next period

T-Code	Purpose
FARR_REPR_CNTR	Reprocess contracts
FARR_REPR_ACCT	Reprocess account determination
FARR_REVERSAL	Reverse revenue documents
FARR_PROD_CLEANUP	Productive data cleanup

---

10. Monitoring / Technical Troubleshooting

These aren't RAR-specific in every case, but you should know them as an RAR consultant.

T-Code	Purpose
SLG1	Application Log
SLG2	Delete application logs
ST22	ABAP Dump Analysis
SM37	Background Jobs
SM36	Schedule Background Jobs
SM50	Work Process Overview
SM66	System-wide Work Process Overview
SM59	RFC Destinations
SICF	Activate/check Web services/Web Dynpro
STAD	Statistical Records
ST03N	Workload Analysis
SM21	System Log

SAP specifically states that RAR uses application log object **FARR**, which can be analyzed through SLG1; SLG2 can remove expired application-log items. (SAP Help Portal)

---

11. Web Dynpro / RAR Applications

SAP also has Web Dynpro applications beginning with FARR_.

For example:

Application	Purpose
FARR_JOB_MONITOR	Monitor RAR jobs
FARR_*	Various RAR Web Dynpro applications

These are activated/managed through **SICF**. SAP documentation specifically mentions activating Web Dynpro applications beginning with FARR_. (SAP Help Portal)

⭐ Most Important RAR T-Codes for an Interview

If you're preparing for a **SAP BRIM/RAR consultant interview**, don't try to memorize everything first.

Learn these:

Priority	T-Code	What you should know
⭐⭐⭐⭐⭐	**FARR_IMG**	RAR configuration
⭐⭐⭐⭐⭐	**FARR_REV_TRANSFER**	Transfer revenue
⭐⭐⭐⭐⭐	**FARR_LIABILITY_CALC**	Contract liability/asset calculation
⭐⭐⭐⭐⭐	**FARR_REV_POST**	Revenue posting
⭐⭐⭐⭐⭐	**FARR_BIZ_RECON**	Reconciliation
⭐⭐⭐⭐⭐	**FARR_CONTRACT_CHECK**	Contract validation
⭐⭐⭐⭐⭐	**FARR_CHECK_CONS**	Consistency checking
⭐⭐⭐⭐	**FARR_RAI_PROC**	Process RAIs
⭐⭐⭐⭐	**FARR_RAI_TRANS**	Transfer RAIs
⭐⭐⭐⭐	**FARR_REPR_CNTR**	Reprocess contracts
⭐⭐⭐⭐	**FARR_REPR_ACCT**	Reprocess account determination
⭐⭐⭐⭐	**FARR_INB_INIT_LOAD**	Initial load/migration

Priority	T-Code	What you should know
⭐⭐⭐⭐	**FARR_MIGR_BALANCES**	Migration balance check
⭐⭐⭐	**FARR_POB_CANCEL**	Cancel POB
⭐⭐⭐	**FARR_SUSPEND**	Suspend/unsuspend
⭐⭐⭐	**FARR_PERIOD_IN_CLOSE**	Period closing
⭐⭐⭐	**FARR_AGGREGATION**	Historical aggregation
⭐⭐⭐	**SLG1**	RAR application logs
⭐⭐⭐	**SM37**	RAR background jobs
⭐⭐⭐	**ST22**	Dump troubleshooting

🔥 **RAR End-to-End T-Code Flow**

For your **BRIM + RAR study**, remember this flow:

BRIM / Operational System

↓

Revenue Data

↓

RAI Processing

↓

FARR_RAI_PROC

↓

Revenue Accounting

↓

Revenue Contract

↓

Performance Obligations

↓

FARR_REV_TRANSFER

↓

FARR_LIABILITY_CALC

↓

FARR_REV_POST

↓

FI-GL

And for checking problems:

Problem

↓

FARR_CHECK_CONS

↓

FARR_CONTRACT_CHECK

↓

FARR_BIZ_RECON

↓

SLG1

↓

ST22 / SM37

↓

Reprocess

↓

FARR_REPR_CNTR

FARR_REPR_ACCT

SAP's current documentation confirms the major processing, reconciliation, contract, migration and period-end reports above. (SAP Help Portal)

Important: don't treat every FARR_* object as a classic SAP GUI transaction code. SAP's documentation distinguishes **transactions, reports, application jobs and Web Dynpro applications**, and availability varies by RAR/S/4HANA release. (SAP Help Portal)

If you're building your **complete SAP BRIM study document**, the next useful section is **“RAR complete configuration from SPRO → RAI → Revenue Contract → POB → SSP → Allocation → Revenue Recognition → FI-GL, with every relevant T-code.”**
